

Matting to the Optical Center

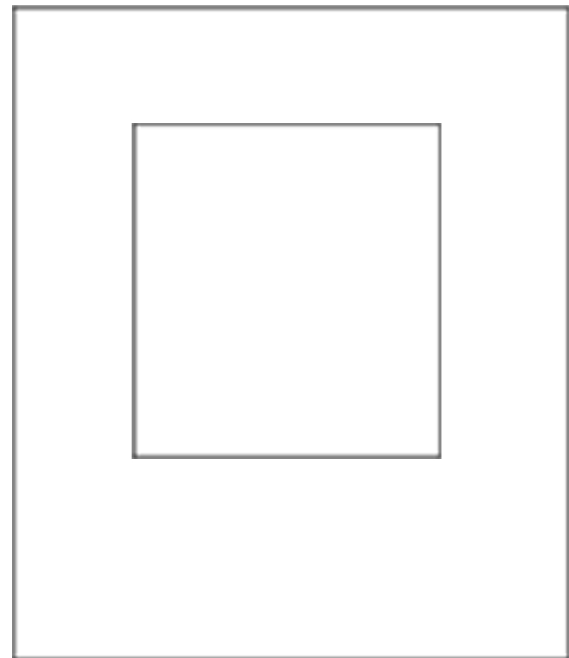

1. Place the work that is to be presented in the upper left corner of the presentation board.

1. Measure and find the midway point to the right and bottom of the remaining board.
2. Draw a very, very light line.

1. Place straight edge from the bottom left corner of the art work to the spot that the horizontal half line crosses the right side of the board.
2. Place the lower right corner of the art work at the point where the straight edge crosses the vertical line.

1. Erase all lines.
2. The art work is mounted in the optical center.
3. This looks better and is much easier than all the calculations that most use.
